### **DETAILED ACTION**

1. This action is responsive to application filed 01/28/2004.
2. The disposition of the claims is as follows: claims 1 - 18 are pending in the application. Claims 1, 13, 15 and 17 are independent claims.

### ***Allowable Subject Matter***

3. Claims 1 - 18 are allowed.
4. The following is an examiner's statement of reasons for allowance:

Applicant's independent claims 1, 13, 15 and 17 stand novel over the related art. For instance, the closest related art listed in the IDS "Skew Correction of Business Card Images in PDA" describes all of said claims. However, the reference is written by the inventors and published after the application date of the instant invention. Thus does not constitute prior art.

The next closest art, are Khosla (US 5,214,718) and Minami et al., (US 6,040,818), hereinafter Minami, both of which present relative light and dark character/background combination of luminance for pixels that teach the first element of the claimed instant invention "binarization part for binarizing pixels of the image into pixels having brightness values associated with character pixels and background pixels".

However both Khosla and Minami are deficient for the remaining independent claim elements, thereby lacking:

"a candidate stripe generation part for generating candidate stripes by performing dilation on character regions of the binarized image;

Art Unit: 2624

a stripe classification part for classifying candidate stripes having a predetermined eccentricity and blob size among the candidate stripes, as valid stripes;

a skew angle decision part for calculating direction angles of the classified stripes, and determining a direction angle having the largest count value as a skew angle; and

a skew correction part for correcting a skew of an image by rotating the image by the skew angle”.

Independent claims 13 and 17, add additional claim elements that are also deficient in both Khosla and Minami. These additional elements are:

“a horizontal pixel subsampling part for performing horizontal subsampling on the binarized image at a predetermined ratio;

a vertical pixel subsampling part for performing vertical subsampling on the image having the candidate stripes at a predetermined ratio;

a stripe classification part for classifying candidate stripes having a predetermined eccentricity and blob size among the vertical-subsampled candidate stripes, as valid stripes”

Therefore as claimed by the combined elements of independent claims 1, 13, 15 and 17, the cited references and prior art of record lack separately and in combination the elements of said claims and therefore said claims are allowed.

Claims 2-12, 14, 16 and 18, depend from allowed independent claims 1, 13, 15 and 17, respectively, and therefore are also allowed.
